BIV3 replacement

According to the Rocla policy for the life cycle of a products, the BIV3 I/O unit has reached the “End-Of-Life” state. This means that we can no longer guarantee repairs or support for it.

In order to ensure the long-term usability of your system it would be beneficial to consider updating your system I/O with the latest technology.

Our recommended solution is to use an OPC server and Beckhoff I/O units. It is also possible for the customer to setup his own hardware and use the OPC server interface to connect to the AGV system. Please consult our staff for further details and options.

Benefits of upgrading:

- Guaranteed spare part availability
- Several options available
- New, modern and supported I/O setup
- Flexible solution for future changes and extensions
